

## *An Ergonomically Clean Solution*

Help your back feel better with our new quality constructed solid polymer footrest. It promotes proper posture thus making you more comfortable.

Available either Grey or Black this attractive and long lasting solid polymer footrest features a special high-friction surface that is environmentally stabilized to resist harsh sun light including ultraviolet light. The surface has a dot pattern texture that inhibits slippage. It is not a laminated surface, but instead it is a single homogeneous polymer sheet that will not rot, swell, or delaminate when exposed to sun or moisture.

**FR500 Series  
Solid Polymer Footrest**

Available with either a three or six inch frame. The three inch frame is designed for use in most standard applications. The six inch frame is designed for applications requiring additional height such as assembly or laboratory work.
