

A Rugged On Site Laptop Stand

FOX BAY INDUSTRIES, INC.

Tripod Laptop Stand

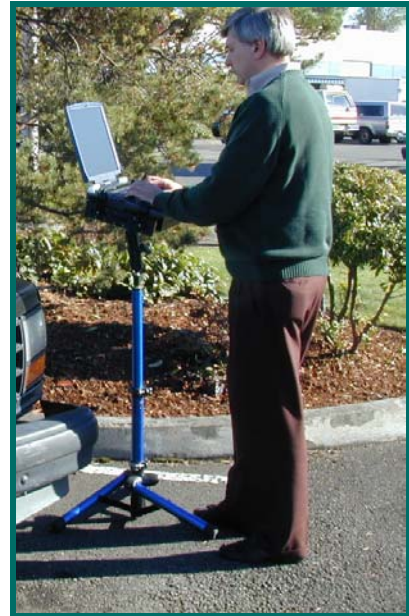

**TLS100
Tripod Laptop Stand**

The large diameter, wide base, aluminum tripod is designed to withstand heavy "on site" use. It features a spring-loaded platform allowing the user to quickly mount and secure their laptop to the stand. It is an extremely flexible field unit. The base may be extended or retracted allowing the user to either sit or stand.

CarpalRest® Tripod Laptop Stand

Easy Height & Tilt Adjustment:

Simply use the large clamp to effortlessly unlock the tripod base and extend the legs of the unit. When fully extended, relock the clamp. Then, unlock tripod extension clamp. Lift the platform to the desired height and lock into place. To position the platform, unlock the tilting mechanism using the convenient knob and adjust it to the desired tilt. Then gently extend the spring loaded platform and place the laptop or notebook computer onto the platform allowing the non-marring arms to securely grasp the computer.

Materials Used:

Heavy wall anodized aluminum tubing with cast aluminum, plastic and rubber hardware. Laptop platforms are made of injected plastic. They are fitted with spring-tensioned restraints that clamp and securely hold laptops, of varying sizes. A foam pad is used to provide additional cushioning and lessen contact point wear.

Platform:

Spring loaded gripping fingers and anti-slip foam surface hold most notebook and laptop computers securely in place.

Base:

Tripod legs constructed of thick wall aluminum tubing with heavy-duty base, clamps, hardware and rubber tips.

Part Number: TLS100 Tripod Laptop Stand

List Price: \$395
